EXERCISE SESSION 4 – Wednesday 15 October 2025 (2 hours)
SQL

STUDENT (StudentID, FirstName, LastName, Address, City)
TEACHER (TeacherID, FirstName, LastName, City, Phone, Salary)
COURSE (Code, Name, Faculty, NumberOfCredits, ProfessorID, NumberOfStudents)
EXAM (CourseCode, StudentID, Grade)

Solve the following queries in SQL:

20. Find the student IDs of students who earned more 30s with honors than 30s.
21. Find the student ID, first name, and last name of students who passed the exams in all courses.
22. Find the average grade and student ID of students whose average grade is higher than the overall average grade.

STUDENT (SId, Name, Birthdate, City, Sex)
COURSE (CourseId, Title, Credits, Year, Professor) Year is 1 for exams of the 1st year
EXAM (SId, CId, Date, Grade) Grade is between 18 and 30

Solve the following queries in SQL:

1. The (weighted) GPA for each year of each student who passed at least 5 exams (more precisely: "who passed at least 5 exams overall", not "5 per year").
2. Students who have never gotten the same grade twice.
3. Students who always got the same grade in all their exams.
4. Students who got all possible different grades.
5. ID and name of the students who passed more exams in the second year than in the first year.
