2. According to Adam Smith, division of labor generates:

A. Higher coordination costs only
B. Economies of scale and learning effects
C. Lower productivity
D. Elimination of managerial roles

3. In Mintzberg's organizational model, which part represents employees performing operational tasks?

A. Technostructure
B. Support staff
C. Working base
D. Top management

4. What is vertical specialization?

A. Grouping workers by geographic area
B. Separation between planning/control and task execution
C. Standardization of products
D. Allocation of tasks based on customer segments

5. Which organizational structure combines functional and product-based dimensions simultaneously?

A. Simple structure
B. Divisional structure
C. Functional structure
D. Matrix structure

1. According to the lecture, entrepreneurs should maximize:

A. Ownership percentage
B. Short-term profits
C. Wealth creation
D. Dividend payments

2. Which of the following is typically an advantage of external investors?

A. Lower scalability potential
B. Slower growth
C. More managerial and strategic support
D. Reduced innovation

3. Venture-capital-backed firms generally tend to:

A. Grow more slowly than traditional firms
B. Reach IPOs or acquisitions more frequently
C. Avoid aggressive investments
D. Reduce innovation activities

4. Which factor is most important for investment funds according to the lecture?

A. Family traditions
B. Strategic control by founders
C. IRR and portfolio returns
D. Industrial heritage

5. What does the lecture suggest about investment decisions?

A. A good company is always a good investment
B. Investors only care about ownership percentage
C. A good deal for a fund is always optimal for entrepreneurs
D. A good company is not always a good investment for a fund

1. From the investor's perspective, the IRR primarily represents:

A. Operating profitability
B. Accounting earnings
C. Expected return on investment
D. Market share growth

2. In valuation analysis, what is the effect of an increase in the required return (cost of capital)?

A. Multiples generally increase
B. Multiples generally decrease
C. Multiples remain unchanged
D. Enterprise value becomes independent from growth

3. In the Gordon Growth Model, the growth rate *g* must generally be:

A. Equal to the discount rate
B. Higher than the discount rate
C. Lower than the cost of capital
D. Negative

4. What does the EV/EBITDA multiple represent?

A. The company's annual tax burden
B. The number of times a company's EBITDA is valued by the market
C. The percentage of shares owned by investors
D. The company's debt repayment capacity only

5. According to the lecture, dilution caused by external investors:

A. Always destroys founder value
B. Is irrelevant for entrepreneurs
C. Depends on the growth generated by the investment
D. Only benefits the investment fund

1. Which of the following best describes a short-term decision?

A. A strategic acquisition decision
B. A decision requiring major capital investments
C. A tactical decision with limited long-term impact
D. A permanent organizational restructuring

2. In short-term decision analysis, only which costs should be considered?

A. Historical costs
B. Sunk costs
C. Relevant (avoidable) costs
D. Depreciation costs only

3. What is the formula for unit contribution margin?

A. Fixed costs – variable costs
B. Price – variable costs
C. Revenues – fixed costs
D. Price – fixed costs

4. In a make-or-buy decision, the preferred alternative is generally the one that:

A. Minimizes revenues
B. Creates the highest economic value
C. Uses more employees
D. Requires more fixed assets

5. If a company's break-even point is very close to its production capacity, the company faces:

A. Low operational risk
B. No fixed costs
C. High operational risk
D. Excess profitability
